Lehrveranstaltungen:

Network Medicine (WS 2021/2022, Seminar, 2 SWS, David B. Blumenthal et al.)

Empfohlene Voraussetzungen:

Some prior knowledge in graph theory and/or network science is recommended.

Inhalt:

Network medicine is an emerging research field which leverages techniques from molecular biology, bioinformatics, combinatorial optimization, and artificial intelligence to uncover potential disease mechanisms and candidates for causally effective treatments in heterogeneous molecular networks. In this seminar, students will dive into selected hot topics in network medicine.

Lernziele und Kompetenzen:

Students will

- develop an understanding of hot topics in the field of network medicine,
- learn how to identify, understand, and contextualize relevant research literature,
- learn how to do a presentation for a scientific audience,
- gain first experience in academic writing.

Literatur:

The seminar will roughly follow the following textbook:

- Loscalzo, Joseph, Albert-László Barabási, and Edwin K. Silverman (eds.): Network Medicine: Complex Systems in Human Disease and Therapeutics. Harvard University Press, 2017.

All relevant literature will be made available in StudOn (<https://www.studon.fau.de/crs3922950.html>).
