
Modulbezeichnung: **Wearable and Implantable Computing (WIC)** **5 ECTS**
 (Wearable and Implantable Computing)

Modulverantwortliche/r: Oliver Amft
 Lehrende: und Mitarbeiter/innen, Oliver Amft

Startsemester: SS 2018	Dauer: 1 Semester	Turnus: jährlich (SS)
Präsenzzeit: 60 Std.	Eigenstudium: 90 Std.	Sprache: Englisch

Lehrveranstaltungen:

WPF MT-MA-BDV ab 1 WPF MT-MA-MEL ab 1 WPF MT-MA-GPP ab 1 WPF MT-BA ab 5
 Wearable and Implantable Computing (SS 2018, Vorlesung mit Übung, 4 SWS, Oliver Amft et al.)

Empfohlene Voraussetzungen:

- Ability to apply sensors, analyse signals, basic signal processing methods.
- Ability to write scripts in Matlab, Python, or similar.

Inhalt:

The course provides an overview on the system design of wearable computing systems and implantable systems. Electronic design topics will be addressed, including bioelectronics, flexible electronics, electronics textile integration, multiprocess additive manufacturing. On the system functional level, frequent sensor and actuators and their designs for on-body and implantable systems are discussed. Powering and energy management concepts will be detailed, including processing and task scheduling, sparse sampling and sparse sample signal processing. Energy harvesting methods for wearable and implantable systems are analysed. Principles of biocompatibility and system validation for remote health monitoring are covered. Concrete design problems related to context awareness, energy-efficient context recognition, and mechanical design in medical applications are demonstrated, prototypes realised and discussed in mini-projects.

Lernziele und Kompetenzen:

Fachkompetenz
Verstehen

- Gain overview on context awareness, sensors and actuators for context management in digital health.
- Understand design concepts and apply/analyse wearable and implantable system design methods for accessories, smart textiles, skin-attachables using soft substrates, and encapsulation.

Analysieren

- Analyse the electrical and physical principles, select and optimise on-body energy harvesting and power management techniques.

Evaluieren (Beurteilen)

- Apply system evaluation methods, assess and design for biocompatibility.

Erschaffen

- Create continuous context recognition and energy-efficient processing using sparse sampling, related signal and pattern processing methods.
- Create digital models of wearable systems.

Literatur:

Literature references will be provided during the lecture.

Verwendbarkeit des Moduls / Einpassung in den Musterstudienplan:

Das Modul ist im Kontext der folgenden Studienfächer/Vertiefungsrichtungen verwendbar:

[1] Medizintechnik (Master of Science)

(Po-Vers. 2013 | TechFak | Medizintechnik (Master of Science) | Studienrichtung Medizinische Bild- und Datenverarbeitung | M5 Medizintechnische Vertiefungsmodule (BDV))

[2] Medizintechnik (Master of Science)

(Po-Vers. 2013 | TechFak | Medizintechnik (Master of Science) | Studienrichtung Medizinelektronik | M5 Medizintechnische Vertiefungsmodule (MEL))

[3] Medizintechnik (Master of Science)

(Po-Vers. 2013 | TechFak | Medizintechnik (Master of Science) | Studienrichtung Medizinische Produktionstechnik, Gerätetechnik und Prothetik | M5 Medizintechnische Vertiefungsmodule (GPP))

Studien-/Prüfungsleistungen:

Wearable and Implantable Computing (Prüfungsnummer: 357435)

(englische Bezeichnung: Wearable and Implantable Computing)

Prüfungsleistung, Klausur, Dauer (in Minuten): 60

Anteil an der Berechnung der Modulnote: 100% Prüfungssprache: Englisch

Erstablingung: SS 2018, 1. Wdh.: SS 2018

1. Prüfer: Oliver Amft
