#### Inhalt:

- Introduction to current research topics of Inorganic Chemistry
- establishing fundamental knowledge required for appreciation of more specialized topics in Inorganic Chemistry; the expected standard is based on a research oriented masters program.
- extension of knowledge by offering the students a choice of lab courses and lectures in specialized fields of Inorganic Chemistry taught by an expert lecturer of the Department
- intensifying practical experience in selected topics of analytical and preparative laboratory work on an advanced skill level

#### Lernziele und Kompetenzen:

The students

- acquire knowledge and expertise required for danger evaluation and practical handling of novel inorganic compounds
- prepare and characterize compounds not previously introduced in mandatory practical courses
- apply and evaluate the guiding principles of inorganic chemistry to practical-preparative problems
- manage and apply the fundamental safety regulations important to handling hazardous compounds and instruct other coworkers in relevant safety topics
