Interface & Catalysis LAB (SS 2022, Vorlesung, 7 SWS, Jörg Libuda et al.)

Inhalt:

Practical introduction to state-of-the-art research in the fields of surface science, interface science, heterogeneous catalysis, electrocatalysis or materials characterization. Guided work on a current research project in a research group. Research topics may cover spectroscopy at surfaces, microscopy at surfaces, in-situ or operando spectroscopy, characterization of catalytic materials, in-situ methods in electrocatalysis, preparation and characterization of nanomaterials, modelling and simulation of interfaces and nanomaterials or similar. Practical laboratory experience to introduce state-of-the-art experimental tools in surface and catalysis research, among them:

- Electron spectroscopies
- Vibrational spectroscopies
- Microscopy at interfaces
- Other characterization methods for surfaces / interfaces
- In-situ and operando spectroscopy and microscopy
- Characterization of nanomaterials
- Electrochemical in-situ characterization
- Photochemical / photoelectrochemical in-situ characterization
- Modelling on processes at interfaces
